fun-miRBench Benchmark Report

Run setting	Value
Experiments evaluated	72
Experiments skipped	0
Predictors evaluated	5
Responsive genes	oriented shrunken log2FC > 0; repression FSOS s-value < 0.05 against d = 0.5
No-response genes	whole shrunken 95% interval of the oriented change below d = 0.5

Evaluation design

- Every predictor is scored on the same 19,226 genes; unscored genes rank last.

- Unresolved genes are left out of the AUROC.

- AUROC on 58 of 72 experiments (at least 30 responsive and 30 no-response genes).

- Spearman on all 72 experiments.

Key results

- Highest mean AUROC: miRBind2-3UTR (0.621).

- Highest mean Spearman: miRDB (0.075).

- Highest responsive pair coverage: miRBind2-3UTR (99.9%).

- Lowest responsive pair coverage: miRDB (25.0%).

Output tables

- per_comparison.tsv: every metric, for each experiment and tool.

- summary.tsv: means and 95% intervals, on all experiments and on unflagged ones.

- coverage.tsv: genes and pairs covered, and experiments retained, per tool.

- recovery.tsv: recall per experiment and tool, at each prediction budget.

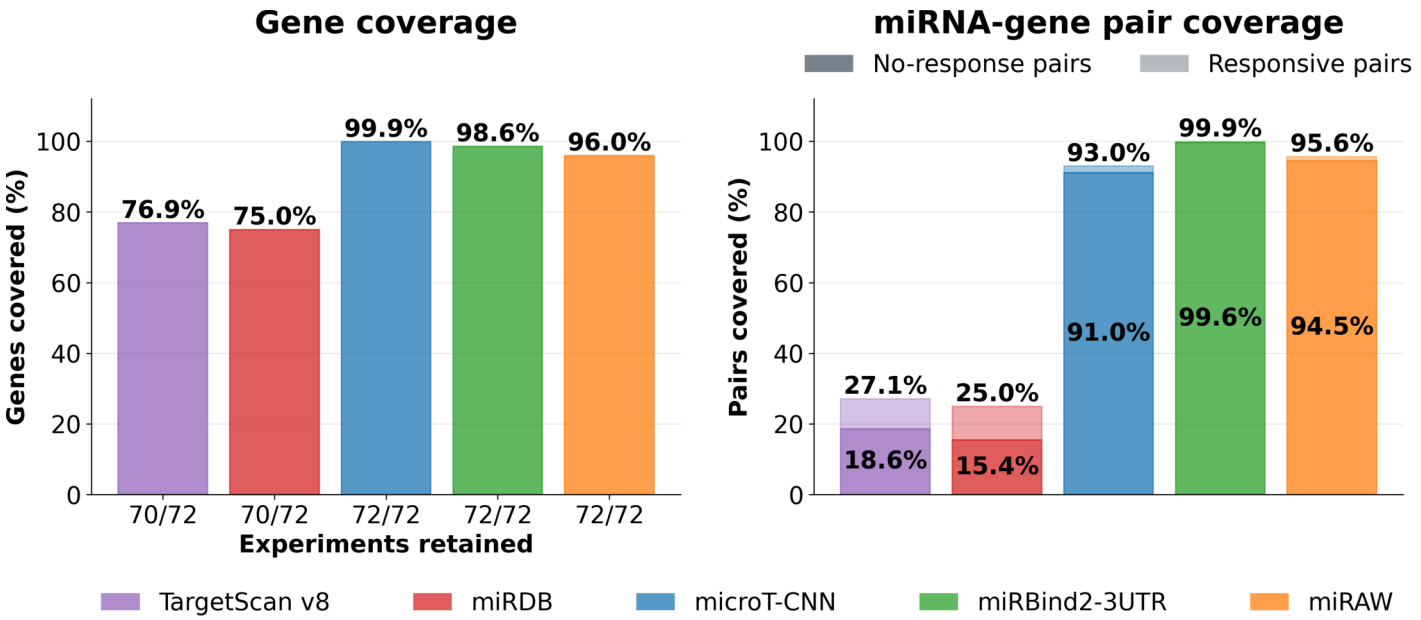

- precision_at_recall.tsv: precision and false positives at 50% recall.

Coverage

- Gene coverage: share of measured genes the tool scores in at least one experiment.

- Experiments retained: experiments where it scores responsive and no-response genes.

- Pair coverage: share of responsive and of no-response miRNA-gene pairs it scores.

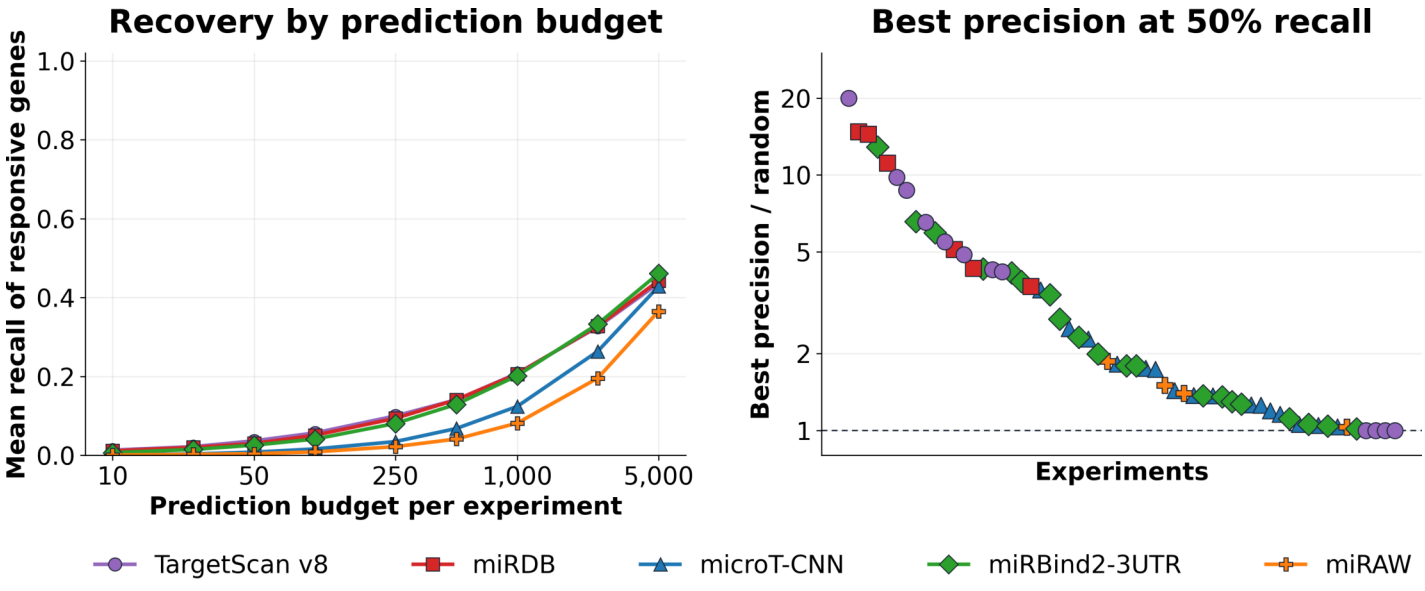

Recovery

- Recall: share of responsive genes in the top genes of the full ranking, mean over experiments.

- Best precision / random: best tool's precision at 50% recall over responsive share.

- Precision counts responsive and no-response genes only.

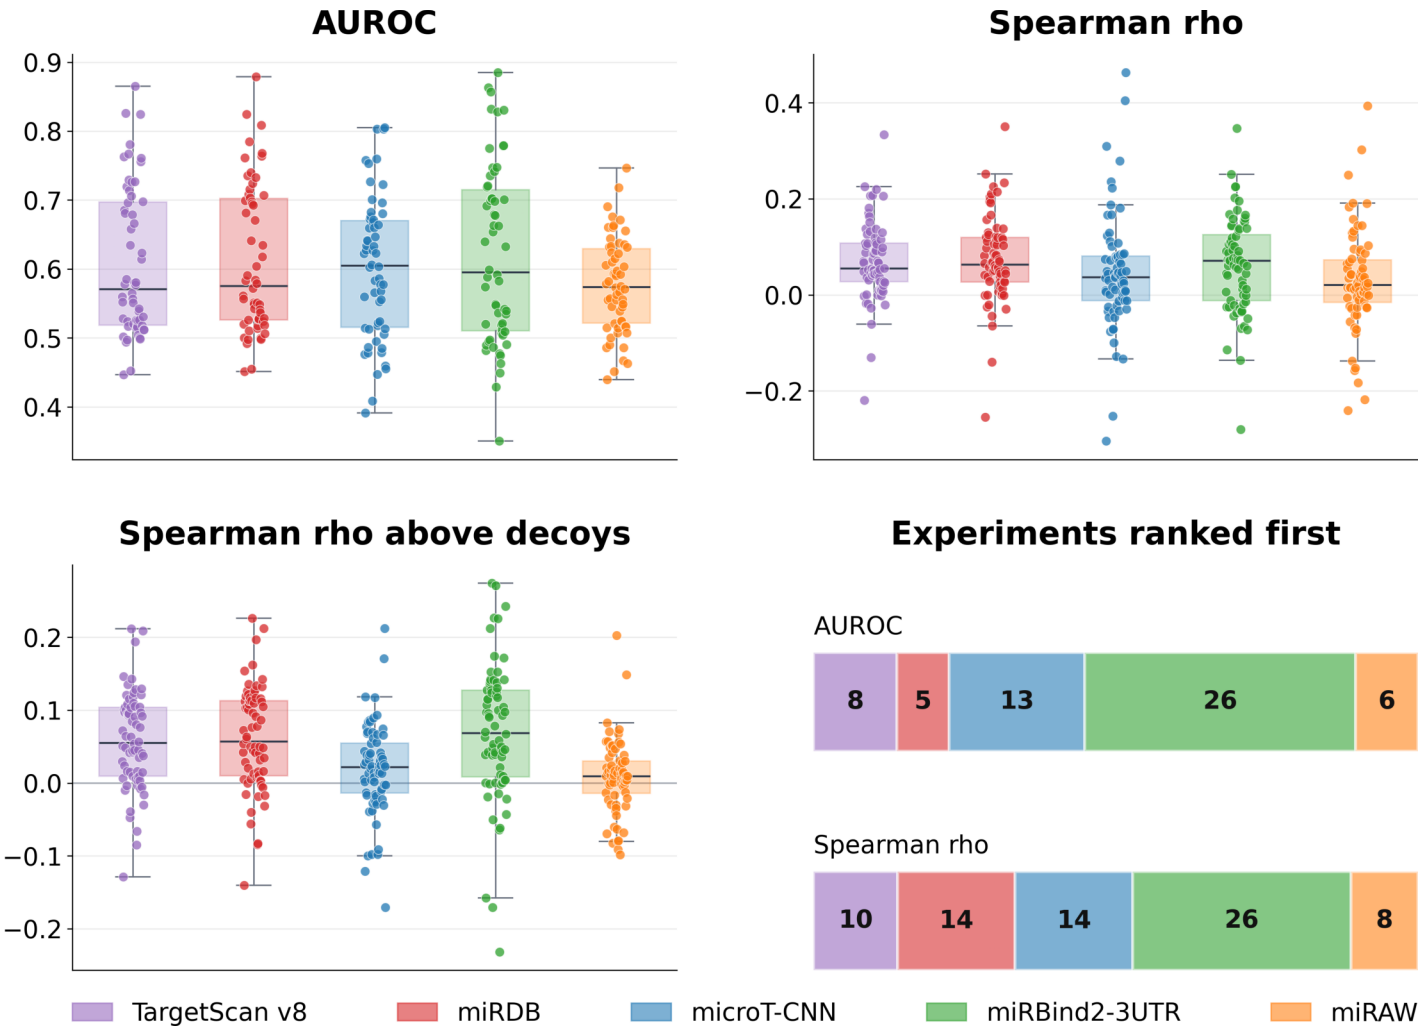

Performance

- AUROC: chance that a responsive gene scores above a no-response gene; 0.5 is chance.

- Spearman rho: agreement of the score's ranking with the shrunken log2FC; 0 is none.

- Spearman rho above decoys: Spearman rho for the tested miRNA minus the mean for different-seed miRNAs.

- Experiments ranked first: the number of experiments where each tool has the highest AUROC or Spearman rho.

Coverage

Predictor	Gene coverage	Experiments retained	Responsive pairs	No-response pairs
TargetScan v8	76.9%	70/72	27.1%	18.6%
miRDB	75.0%	70/72	25.0%	15.4%
microT-CNN	99.9%	72/72	93.0%	91.0%
miRBind2-3UTR	98.6%	72/72	99.9%	99.6%
miRAW	96.0%	72/72	95.6%	94.5%

Performance

Predictor	Mean AUROC	Mean Spearman	Mean Spearman rho above decoys	Ranked first, AUROC	Ranked first, Spearman
TargetScan v8	0.608	0.069	0.058	8	10
miRDB	0.612	0.075	0.062	5	14
microT-CNN	0.601	0.046	0.019	13	14
miRBind2-3UTR	0.621	0.062	0.069	26	26
miRAW	0.577	0.030	0.008	6	8

Recovery

Predictor	Mean recall at 5,000 genes	Ranked first at 50% recall
TargetScan v8	0.436	12
miRDB	0.443	6
microT-CNN	0.428	16
miRBind2-3UTR	0.461	20
miRAW	0.365	4
