fun-miRBench Benchmark Report

21 datasets, 5 predictors

Run setting	Value
Datasets evaluated	21
Datasets skipped	0
Predictors evaluated	5
Responsive genes	oriented shrunken log2FC > 0; FSOS s-value < 0.05 against d = 0.5
No-response genes	whole shrunken 95% interval of the oriented change below d = 0.5

Evaluation design

- Higher aligned scores mean stronger predicted targeting.

- Every predictor is scored on the same 19,226 genes; a gene it does not score ranks last.

- Unresolved genes are left out of the AUROC.

- Overexpression (OE) datasets only.

How to read this report

- The cross-dataset table is the primary summary.

- Low-coverage predictors stay in the table and the plots.

Primary file	Purpose
per_comparison.tsv	Every metric per dataset and predictor
summary.tsv	Means over datasets with 95% intervals
coverage.tsv, recovery.tsv	Tables behind the plots
precision_at_recall.tsv	Table behind the recovery plot

Cross-Dataset Predictor Summary

Mean performance across datasets, every predictor on all genes.

Key results

- Highest mean AUROC: miRBind2-3UTR (0.643).
- Highest mean Spearman: miRBind2-3UTR (0.095).
- Highest coverage: miRBind2-3UTR (98.3%).
- Lowest coverage: miRDB (14.0%).

Coverage notes

- Coverage is score availability; a gene a predictor does not score ranks last.
- AUROC on 17 of 21 datasets (at least 30 responsive and 30 no-response genes).
- Spearman on all 21 datasets.
- Low coverage (<25%): TargetScan v8: 16.6%; miRDB: 14.0%.

Predictor	Coverage	AUROC	Spearman
TargetScan v8	16.6%	0.627	0.078
miRDB	14.0%	0.632	0.087
microT-CNN	90.7%	0.610	0.040
miRBind2-3UTR	98.3%	0.643	0.095
miRAW	92.9%	0.574	0.012

Coverage

Genes each tool scores and the responsive and no-response pairs it covers.

All Genes

AUROC, Spearman with the shrunken log2FC, and the experiments each tool wins.

Recovery

Recall by prediction budget and each experiment's best precision at 50% recall.
